

TRANSFIELD SERVICES TAKES DELIVERY

Transfield Services Transmission & Distribution team in Western Australia has taken delivery of three 18m Glove & Barrier EWP's from Sherrin Equipment.

Michael Bourke, Vehicles & Equipment Manager Australia, placed the initial order on behalf of Transfield Services in March 2008.

Transfield Services had used the Series 1 units with great results, and following demonstrations in Victoria, were convinced the Series 2 product ticked all the boxes.

Sherrin Equipment's commitment to guaranteed delivery schedules also won over Transfield Services. When the units rolled out of the Pinkenba manufacturing premises on time, Michael couldn't have been happier, saying "Sherrin Equipment have shown that they can deliver a quality product meeting all the requirements in a challenging market."

Sherrin Equipment General Manager, Ben Hill, coordinated the Transfield Services specification requirements and was pleased with how smoothly the process evolved.

"Whilst we had some unique specifications to add to our units, including their toolbox design, it has been a pleasure working through this process with Transfield Services," said Ben.

He added: "Rick Denniston, Regional Vehicles & Equipment Manager WA, and his team, were clear in their specific needs and through regular and open discussions we have been able to produce a product that they will be happy with for many years."

The provision of a fully serviced workshop facility located in Perth, with 24 hours and seven day availability, also factored in the decision to purchase from Sherrin Equipment.

This feature, combined with the availability of a rental fleet to support fluctuating workload demands and maintenance requirements, completed the package for Transfield Services.

The final units from the initial Transfield Services order are currently being assembled in Sherrin Equipment's facilities at Pinkenba. These are running to schedule with delivery later in 2008.
