

SHERRIN Equipment

LAUNCHES 24M G&B EWP

Sherrin Equipment has continued to expand its range of EWP's with the release in January of their 24m Glove and Barrier EWP.

The 24m EWP was developed at the request of many customers who have been impressed with the performance and reliability of our flagship model 18m Glove and Barrier EWP.

In designing the 24m our engineers were given the brief to ensure as much componentry and functionality as possible was incorporated in the design of the 24m from the 18m EWP. The resultant 24m design shows a great resemblance to the 18m and is affectionately known as the bigger brother.

Our first sales unit went to work in early February and hasn't missed a beat. Having clocked up almost 400 hours already, the inherent strength of design derived from the 18m is clearly evident.

Our first hire unit was accepted with open arms by Ben Hill, National Fleet and Logistics Manager, and sent to work immediately in NSW following the successful completion of Electrical Testing by two authorities. As is the case with our first sales unit, the hire unit has received terrific reviews with functionality and reach capabilities being endorsed by the end users.

The 24m EWP is available for sale and also for hire through Sherrin Equipment's rapidly expanding hire fleet which now includes 11m, 13m and 18m models in 4x2, 4x4 and 6x4 options.

Our 24m model will be on show at the Electricity Supply Industry Field Day at Homebush in Sydney on 5th and 6th May.

For sales or hire enquiries call our 24/7 national number **1300 905 550**.

Be sure to stay tuned to our website as further equipment releases are planned throughout 2010.
